

CLAIMS

We Claim:

1. A disposable urine collection kit to be used by a person, said kit comprising:
 - an absorbent pad, said absorbent pad comprising:
 - a waterproof lining;
 - a layer of hydrophilic gel and absorbent materials; and
 - panels of absorbent material;
 - wherein said absorbent pad is configured to be positioned against the
urinary area of said user;
 - at least one folded lap cover sheet;
 - at least one sanitary wipe sheet; and
 - an envelope enclosure, said enclosure comprising a flap with a seal wherein
said enclosure may contain said absorbent pad, said at least one lap
cover, and said at least one wipe sheet, both before use and after use by
said user.

2. A disposable urine collection device to be used by a person, said device comprising:

an absorbent pad;

a waterproof bag attached to said absorbent pad, said waterproof bag further comprising a sheet of absorbent material positioned on an external surface thereof on a side where said absorbent pad is attached, said absorbent pad being centered on said sheet of absorbent material, said waterproof bag further comprising first and second extensions positioned so as to permit the closure of the waterproof bag by tying said first and second extensions together after said waterproof bag has been inverted so as to enclose said sheet of absorbent pad and said sheet of absorbent material.

3. The disposable urine collection device of Claim 2, wherein said waterproof bag further comprises:

an additional waterproof wall on a side of said waterproof bag between said waterproof bag and said absorbent pad, said additional waterproof wall defining a further layered enclosure adjacent an enclosure defined by said waterproof bag, said further layered enclosure containing an amount of absorbent material, said additional waterproof wall further defining an aperture there through positioned immediately adjacent said absorbent pad and capable of receiving fluid flow there through into said additional absorbent material; and

wherein said absorbent pad further defines an aperture positioned adjacent to the aperture defined by said additional waterproof wall such that excess fluid flow from said absorbent pad may flow into said additional absorbent material.

4. A disposable urine collection device to be used by a person, said device comprising an absorbent pad configured in a generally boat-shaped structure having a narrow section to be positioned in a forward facing orientation when used and a wider section positioned opposite said narrow section and to be positioned in a rearward facing orientation when used; and

a waterproof bag attached to said absorbent pad.
